## China Castpart Exhibition

### 8<sup>th</sup> China International Non-Ferrous and Special Foundry Exhibition

*April 12-14, 2011*

*Nanjing International Expo Center, Nanjing, CHINA*

Organizer:  **CHINA FOUNDRY ASSOCIATION**

Concurrent Events:

2<sup>nd</sup> Meeting of 6th CFA Board of Directors

China Foundry Summit

Quality Casting Competition

2011 China International Casting Purchasing Conference

Supporting Media:

**CFN**

## Invitation by China Foundry Association

### Distinguished Foundrymen,

First of all, please accept my sincere appreciation and heartfelt greetings for your longstanding support for China Foundry Association .

Adhering to the principles of “showing the advance of China's foundry industry (CFA), abridging China Foundry with the world and leading China foundry to go global”, China Foundry Association have organized foundry exhibitions since 1990. Within two decades, supported by foundrymen and partners from home and abroad, CFA's shows, are enhancing considerably in terms of space, reputation and quality, making contribution to China's sustained and healthy development of foundry industry.

In May 2010, organized by CFA, China International Foundry Expo (CIFEX) staged in Beijing, luring 1,326 exhibitors from 30 countries and regions covering a total area of 106,000 m. In the 4-day exhibition, a total of 47,693 visitors by admission took part in the fair, an unprecedented record in the history of CFA's show. Currently, the structure of CFA's show has come into being: China International Foundry Expo, the comprehensive event, planned in the even years in Beijing, Non-ferrous & Special Foundry along with Castpart are scheduled to stage in odd years in certain city in Yangze River Delta.

In 2011, with innovative concept, China Castpart Exhibition, stemming from Casting China International will make its debut in Nanjing along with 8th China International Ferrous & Special Foundry Exhibition. Castpart mainly focuses on the integral production chain of foundry industry. Apart from conventional exhibits from castings, foundry equipment and consumable materials, Castpart introduce machine tools, hand tool and relevant finished-casting processing equipment. Held concurrent to China International Marine, Port & Shipbuilding Fair, Global Clean Energy Congress and The 6th China Jiangsu International Agricultural Machinery Exhibition, Castpart and Non-ferrous and Special Foundry open to the production line of casting manufacturing, processing and application, a effective platform of trade opportunities.

2011 8th China International Non-ferrous & China Castpart Exhibition will be staged in Nanjing International Expo Center. Nanjing, the historic city located by Yangze River, is an important production base for equipment manufacturing. You're bound to find trade opportunities in picturesque Yangze River Delta, the most dynamic commercial center in China.

Let us go to Nanjing in 2011, a city of opportunity in East China.

Executive President & Secretary-General of CFA

Zhang Libo

Oct. 8, 2010

## Highlights

### **Building Integral Production Chains**

This event covers the chains of foundry equipment+consumable materials→casting manufacturing→Machining operation→matchmaking with end-users.

Turn right, meeting your suppliers and turn left meeting your buyers.

### **Advocating the Concept of Deep Processing, Enhancing the Value-Added**

Foundries are encouraged to exhibit the cast part used as components and assembly that could be installed directly in machines and automobile. For the first time, machine tools, hand tool and relevant casting processing equipment are introduced to be part of Castpart, a vane leading foundries to deep processing.

### **Buyer Groups with Decisive Purchasing Ability**

10 buyer groups from automobile, agricultural machinery, shipbuilding and plastic machinery will show up to make purchase.

### **New Geographic Planning of CFA's Events**

Starting from 2010, CFA's exhibitions has been restructured: China International Foundry Expo, the comprehensive event, permanently planned in the even years in Beijing, There will be no circuit between Shanghai and Beijing. For the odd years, Non-ferrous & Special Foundry along with Castpart is the only CFA's event held every two years meeting the market needs of East China.

### **2011 China Castpart Exhibition**

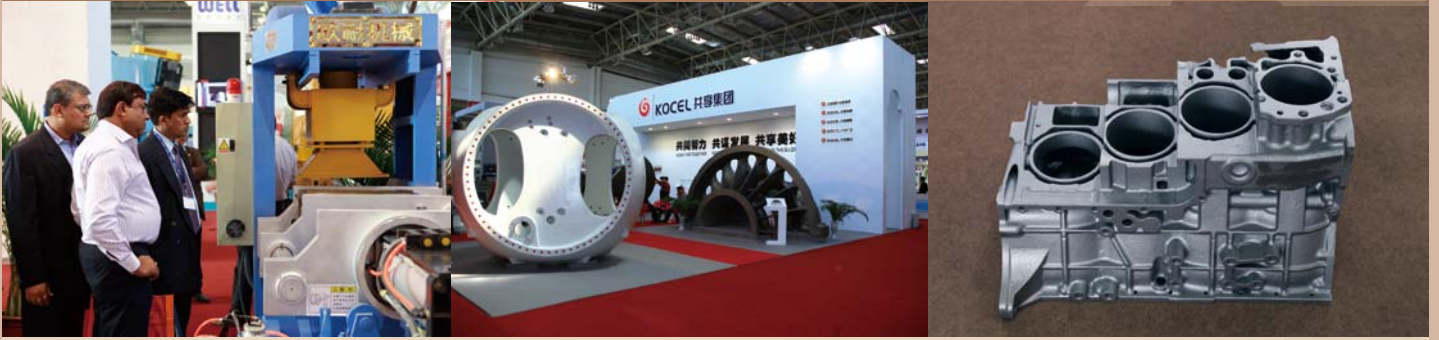

China, the world No.1 metalcasting producer and consumer, manufactures above 30% of world casting annually. However, the margin of casting is gradually waning against the background of hike in raw materials and labor cost. It is widely accepted that merely relying on churning out conventional products is doomed to lose ground and to be squeezed out of market. Seeking the added profit from the integral value chain and deep processing has become a consensus among the foundrymen. Starting from the semi-finished casting to a sophisticated component, it is the route to bigger margin and way to enhance competitiveness. 2011 China Castpart exhibition, advocates the concept of deep processing and encourage the exhibits of finished products and component. Combining the production chains, showcasing the cooperation of the production chains are the major target of the Castpart.

### **8th China International Non-ferrous and Special Foundry Exhibition**

Since 1998, successfully staged for 7 editions, China International Non-ferrous and Special Foundry Exhibition gains a foothold in East China, open to all China and wins the reputation as Asia renowned foundry fair.

China International Non-ferrous and Special Foundry Exhibition, planned on the basis of National 12th Five-Year Planning on Foundry Industry, is a platform for cutting-edge foundry equipment, consumable materials and non-ferrous castings, promoting the strategic shift from made in China to innovated in China, moving up the value chain from labor-intensive industry to high-tech industry.

### **1.Non-ferrous & Ferrous semi-finished, finished casting, cast parts that applied to**

(1)automobile, machine tools, wind power, shipbuilding, general machinery, agricultural machinery, engineering machinery, power plant, rail transport, IT, petrochemical pump & valve  
(2)assembly (automobile & motorcycle castings, mill roll, valve, iron mould, art casting, wear-resistant casting, castings in engine, gear-box, exhaust system, axle system, steering system, braking system, combustion engine )

### **2.Foundry Equipment for**

Investment Casting, Die Casting, Low Pressure, Gravity Die Casting, Vacuum Process Molding, Full Mold Casting and Continuous Casting, Centrifugal Casting, Non-ferrous Casting Cold/Hot Chamber Diecasting Machine, Magnesium Alloy Diecasting Machine, Aluminium Smelting Furnace, Pattern, Core-making Machine, Sand-Blasting Machine, Environment Protection Machine, Software, Testing Maching

### **3.Consumable Materials**

Alloy of Aluminium, Copper and Zinc, Pig iron, Scrap Steel, refractory, Refining agent, Foundry Sand, Resin, Coke, Coating, release agent, steel shot, firming agent, bentonite

### **4.Casting Processing Equipment**

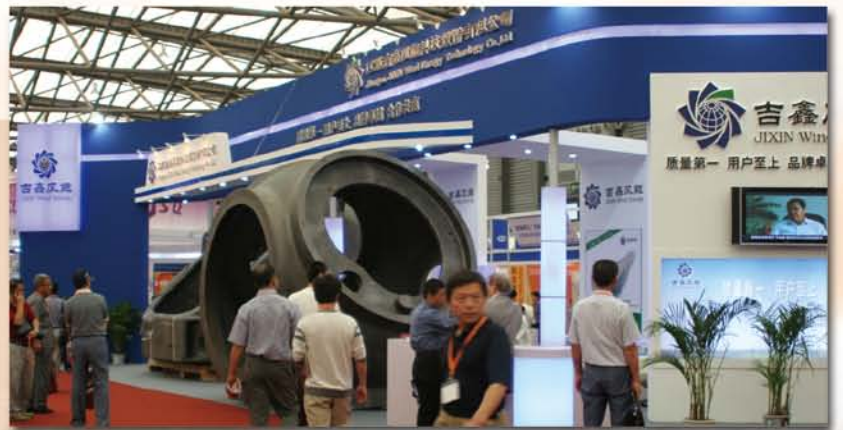

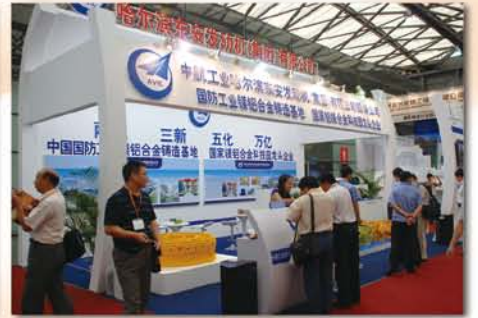

CNC Machining Center, Three-coordinate measure instrument, Nondestructive Flaw Detection Devices, Cutting tool, Measuring tool, Robot, Testing devices, Thermal Treatment, infiltration devices, Welding, surface treatment

### **5.Scientific results, periodicals, website and other services**

# Reviews on Last Event

### **Mr. Roger Hayes, Director of Metal Casting & Foundry Machinery & Supplies - CISA**

“According to the feedback from U.S. exhibitors, we're very satisfied with the outcome, The quality of Chinese castings has improved dramatically in recent years. We look at China as the most important emerging market with great potentials to explore. In the future, it is anticipated that more and more U.S. companies will come to China for partnership, establishing their sales network and after-sales service centers. We expect more participating companies of the U.S. pavilion for next edition.”

### **Trade Visitor:**

### **Mr. Boersma from Prins company of Holland**

I'm in the trading company in castings and forgings in Holland. This is the first time I visiting the expo. I'm walking around the hall and made some contacts with local foundries. I got some suppliers in lost-wax castings and sand castings. I'm also impressed by the good number of foundries with high quality. The layout is convenient for us to visit.

# Welcome to Nanjing

Lasting for over 2500 years, Nanjing is a city famous for its splendid history and culture. Since the 3rd Century, 10 dynasties and regimes have designated Nanjing as their capital in succession. Nowadays, entering the 21st Century, with rapid development of China in various fields, Nanjing has become an important city in Chinese regional economy, the capital of Jiangsu Province, one of the most important transportation hubs in Eastern China, as well as an international commercial port only next to Shanghai in the Yangtze River Delta. It ranked the 4th place among "the 100 best commercial cities in mainland China in Forbes in 2008" and was awarded "the UN Habitat Scroll of Honor Special Citation". Nowadays, Nanjing has become one of the international cities with the most brilliant development prospect in the Asian-Pacific Region in the 21st Century.

## The introduction of Nanjing International Expo Centre (with the picture of transportation outside the venue)

Nanjing International Expo Centre is located in the Hexi new town which is the vector of modern service industry in Nanjing. Intergrated with Nanjing Olympic Sports Centre, Nanjing Green Exposition, the central CBD and many star hotels and restaurants, Nanjing International Expo Centre forms functional complement with each other. Nanjing International Expo Centre also collects with Nanjing Railway Station, Bus Station, Nanjing Yangtze River Bridge, the second and third Yangtze River Bridge, Tunnel and river port by a number of fast roads. It will take 30 minutes to Xinchengwei port, highway of Lukou International Airport and highway of Shanghai to Nanjing. Leaving from Exit B of Youfang Bridge, there is 3 kilometers to drive to exhibition hall. It lies at Nanjing International Expo Centre-Yuantong Station as the intersection of Metro Line 1 and Metro Line 2. In addition, the construction of Beijing-Shanghai highspeed railway hub "Nanjing South Station" is located in the south of Nanjing International Expo Centre. It provides a unique advantage for transporting goods.
