CONDAT LUBRICANTS RANGE FOR FOUNDRY

Since its foundation in 1854, CONDAT has specialized in formulating, producing and commercializing special chemical products, along with a wide range of industrial lubricants that have made a name for the company.

In the field of foundry, CONDAT has developed a **complete range of lubricants** designed to meet the needs of all casting techniques at all stage of the foundry process:

- Lubricants for high pressure die casting of aluminium, magnesium and zinc alloys.
- Lubricants for gravity die casting.

PROCESS LUBRICANTS:

- Coating Lubricants
- Die lubricants
- Plunger lubricants

MAINTENANCE LUBRICANTS FOR PRESSES AND TOOLS:

- Slide-rail lubricants
- Fire resistant hydraulic fluids
- Pastes and greases

In the scope of its global offer, CONDAT also offers **annexed products**

LUBRICANTS FOR ASSOCIATED MANUFACTURING / METAL WORKING:

- Cutting evanescent fluids
- Machining lubricants for aluminium working

ASSOCIATED EQUIPMENTS:

- Dosing systems
- Control equipment

Offering the right equipment with the appropriate lubricant allows CONDAT to recommend a global solution for each foundry.

CONDAT MAIN ASSETS

MEETING CUSTOMER NEEDS AND ENVIRONMENTAL CONSTRAINTS

CONDAT has always worked closely to its customers and is used to established partnerships with them with the purpose of offering solutions adapted to their needs and issues.

Due to new technical attempt (quality parts, finishing,...), market pressure (productivity,...), waste treatment cost that increase, environmental legislation evolution, CONDAT offers **a global solution** for the **continuous improvement of the lubricant during its life cycle** (at all stage while mixing, dosing, spraying, controlling, filtration, recycling, water treatment).

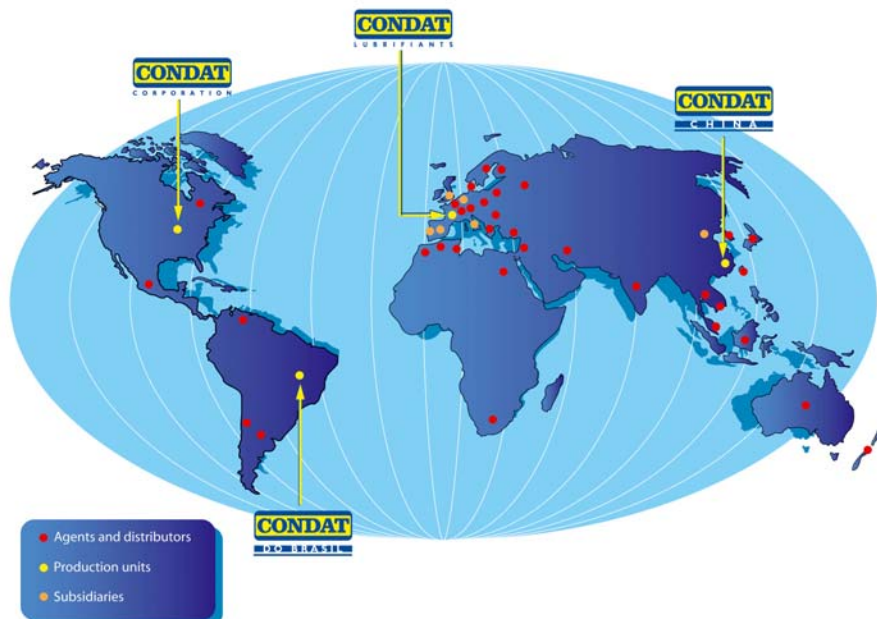

In this context, consumption and production costs are significantly reduced.

CONDAT has also recently invests important resources to put into conformity its raw material and range of products **with most recent European legislations** (REACH, BIOCIDES).

A WORLDWIDE PRESENCE

With a focus on efficiency and proximity, CONDAT has recently decided to intensify its process of internationalisation worldwide. Beyond production units in France, United States, Brazil and China, CONDAT has also several subsidiaries in Europe with one in Germany, CONDAT GmbH.

CONDAT INNOVATIONS FOR GIFA 2007

At GIFA 2007, CONDAT will present its highly performing range of lubricants of which:

➤ **The CONDAFOND range:**

Die lubricants for aluminium/magnesium/zinc alloys. This range has been completely reformulated to meet with REACH and BIOCIDES legislations, but also with all the expectations of the foundry profession:

- Different synthetic, waxes, minerals bases ...
- Different concentrations from 0,5% to 3%
- Different protections (anti-bacteria,)
- Different temperature ranges
- Different values of DOC in particular.

One of the new properties of the **CONDAFOND GM07B** is its low DOC after being « broken » in retreatment station even at a high level of dry extract.

- A new tailored service: CONDAT offers a diagnosis with its **thermal camera** so to recommend the best product.
