

CONDAT LUBRICANTS FOR FOUNDRY AT GIFA 2007

At GIFA 2007, CONDAT will display its complete lubricants range for foundry that fits with the most recent **European legislations** (REACH and BIOCIDES).

This range covers all casting techniques offering:

- Coating Lubricants
- Die lubricants
- Plunger lubricants
- Slide-rail lubricants
- Fire resistant fluids
- Pastes and greases

In the scope of its global offer, CONDAT also offers **annexed products** such as lubricants for metal working and associated equipments.

At GIFA 2007, CONDAT will present its highly performing range of lubricants of which:

➤ **The CONDAFOND range:**

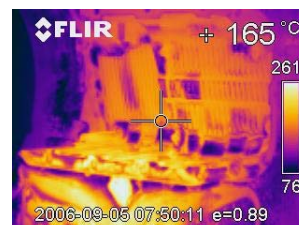

Die lubricants for aluminium/magnesium/zinc alloys. This range has been completely reformulated to meet with REACH and BIOCIDES legislations, but also with all the expectations of the foundry profession:

- Different synthetic, waxe, mineral bases ...
- Different concentrations from 0,5% to 3%
- Different protections (anti-bacteria,)
- Different temperature ranges
- Different values of DOC in particular.

One of the new properties of the **CONDAFOND GM07B** is its low DOC after being « broken » in retreatment station even at a high level of dry extract.

- A new tailored service: CONDAT offers a diagnosis with its **thermal camera** so to recommend the best product.

CONDAT present on
Hall 11 booth B20
