

Siempelkamp Giesserei

Siempelkamp

ADVANTAGE IN CASTING

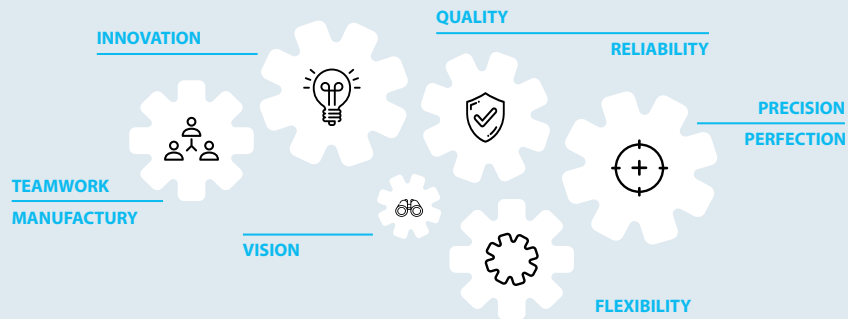

We set standards:

Our castings in terms of complexity, precision and quality.
Our team in terms of reliability, expertise and service.

FOR OVER 100 YEARS

VALUES MADE IN KREFELD

Founded in 1902 as Siempelkamp'sche Eisen- und Metallgiesserei, this name still commits us to one goal: to provide the perfect answer in cast iron. The basis for this is our experience, which we are continuously expanding. With excellent metallurgical know-how, constant research and development and with personal commitment to every project. **But with one thing above all: Passion for our trade.** Turning the idea into a casting, the vision into innovation.

ADDED VALUE

FIRST CASTING THEN MECHANICAL PROCESSING

We can not only supply large castings in top quality, but also finish the workpiece at the same location. **We work in a network, prepare the production and mechanical processing together.** So you can be sure that planning, production, quality assurance, machining and transport do not become a time-consuming and budget-consuming hurdle, but a smooth relay race.

OUR OFFER

ADVANTAGE IN CASTING

The benchmark: 100%. For our castings in terms of complexity, precision and quality. For ourselves in terms of reliability, expertise and service. The results are large and heavy ductile iron castings from 3 to more than 300 tons, which provide more performance, greater safety and sustainability. Whether in energy conversion or in raw material processing, in press construction or in general mechanical engineering.

You have the idea, we make it happen. Our specialists create a seamless production process from the selection of the best material to the on-schedule delivery of the finished components. Tailor-made, everything from a single source and under the internationally proven Siempelkamp brand. For you this means: pooled expertise, less time required, lower costs. And castings of the highest quality, which also meet increasing market requirements in the long term.

OUR CASTING SOLUTIONS

We take on any challenge to make you a satisfied customer. We achieve this with endurance, versatility, strength and the will to continuously improve in every single discipline. Day after day and project after project – whether it's a 3 t casting or a record 320t casting.

Our goal in doing so: a leading position in terms of manufacturing competence, service and innovative strength. A thirst for knowledge, the joy of mutual success and the further development of our products, continuously practised by our experts pave the way for this. The results are the most advanced casting solutions for established and new markets that will put you that crucial step ahead.

We currently produce around 2,000 castings per year and both the demand and requirements for highly complex castings are constantly growing.

STAY AHEAD WITH US

INVESTMENTS IN OUR AND YOUR COMPETITIVENESS

We are ensuring Siempelkamp Giesserei's efficiency with specific investments in our production. Examples from recent years: extended moulding shops, larger blasting capacity with robot-controlled blast house and test stations for quality control as well as other newly built pattern storage. We have therefore created the basis for constant and future-proof "made in Krefeld" production.

OUR INDUSTRY SOLUTIONS

WIND ENERGY, TURBINE AND POWER PLANT CONSTRUCTION, NUCLEAR POWER

Whether we are optimising a material for you or co-developing or further developing a design: the entire range of castings for energy conversion is one focal point of our range of services.

RAW MATERIAL MILLS FOR ORE EXTRACTION AND FOR CEMENT AND COAL GRINDING

Continuous operation, increasingly inaccessible deposits and fierce competition: our castings for raw material production have to deliver and perform. This is the premise under which we develop and manufacture components for the processing of raw materials.

MADE IN KREFELD

ROLLING MILLS, FOOD INDUSTRY, MACHINE TOOL CONSTRUCTION, MEDICAL TECHNOLOGY

For machines in a wide variety of sizes and geometries for special applications, the choice of the optimum material and maximum precision during production play an important part. Our offer is correspondingly broad.

WE ARE THE CURRENT RECORD HOLDER: A LOWER BEAM WITH 320 T

METAL FORMING, PLASTIC INJECTION MOULDING MACHINES, COMPOSITE PRESSES, TILE PRESSES, STONE PRESSES

We develop sustainable solutions, continually optimising them, finding the best material and pushing the physical boundaries – all according to your specifications, your requirements, your visions. We like to go beyond the known and set new records.

Siempelkamp

The Siempelkamp Group is an international technology supplier consisting of three divisions: the machine and plant engineering, the foundry technology, and the services. Siempelkamp machine and plant engineering is a systems supplier of press lines and complete plants for the wood-based panel industry, the metal forming industry as well as the composite and rubber industry.

The Siempelkamp foundry is one of the world's largest hand-molding foundry producing castings at the Krefeld site with a backweight between 3 t and 320 t as individual parts for project business as well as repeat parts with series character. Siempelkamp engineering and service is a specialist for dismantling nuclear facilities and a supplier of transport and storage vessels for nuclear waste.
